VVS - Reflection Smart Stream

The Reflection software is a live video encoding software, intended to be used in real time environments where hardware encoders are not optional or suit your needs.

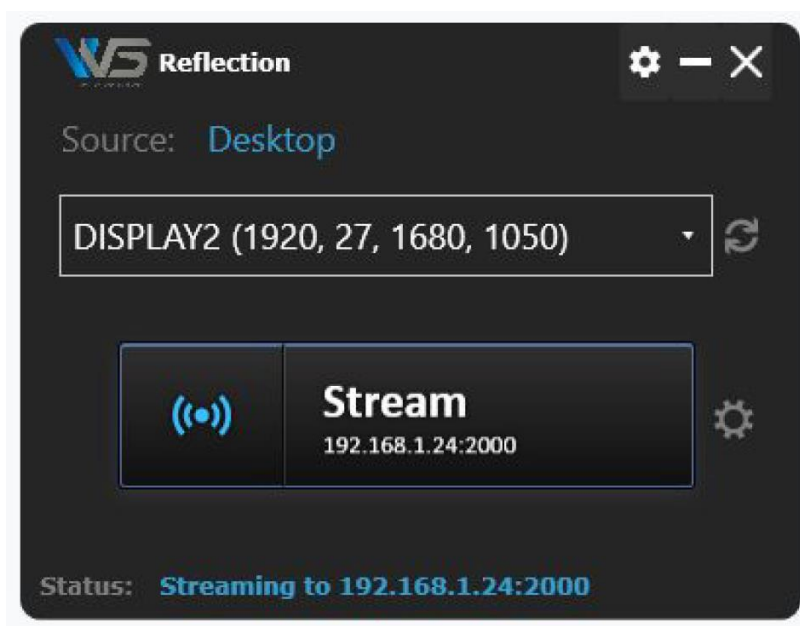

The capabilities of the software include amongst many options, the ability to select a screen from multiple screens to be streamed to any network address.

The Reflection streamer can also encode up to 4 screens with HD Resolution and stream them as one. (for more then one screen frame rate may drop).

Reflection Streamer supports custom bitrate and resolution scaling among its many features, here are some highlights:

- 3 preset modes for streaming quality
- Custom Settings for bitrate,FPS etc.
- Auto start with windows
- Automatic streaming mode
- Simple one button stream operation.

The Reflection Smart Stream is intended to be used with a 24/7 99% uptime environment. Its unique way of running its resources directly from memory gives it the ability to deploy and work on virtual machines.
